E-COMMERCE WEB APPLICATION

Assignment: Create Tasks from Given Requirements

Project Title: Online Shopping E-Commerce Website

Objective: Develop a web application where customers can browse, search, filter, and purchase products online. Customers can manage a shopping cart, choose a payment method, and receive order updates by email.

1. Tasks Created from Requirements

Task 1: Product Display

- Create a product page.
- Display all available products with name, image, price, and description.
- Allow customers to view product details.

Task 2: Product Search

- Create a search bar.
- Allow customers to search for products by name.
- Display matching search results.

Task 3: Product Filter

- Create product categories.
- Allow customers to filter products by category.
- Add minimum and maximum price filters.

Task 4: Shopping Cart

- Allow customers to add selected products to the cart.
- Allow customers to increase or decrease product quantities.
- Allow customers to remove products from the cart.
- Calculate the total price automatically.

Task 5: Checkout System

- Create a checkout page.
- Collect customer name, phone number, and delivery address.
- Provide Cash on Delivery (COD) and Online Payment options.
- Allow customers to confirm their orders.

Task 6: Order Confirmation Email

- Send an order confirmation email to the customer.
- Include the order number, product details, and total amount.
- Notify the customer when the order is confirmed.

Task 7: Order Status Notification

- Send email notifications when the order status changes.
- Support these statuses: Pending, Confirmed, Processing, Shipped, Delivered, and Cancelled.

2. Main Modules of the Project

Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': '**Module**' 'frags': [ParaFrag(__tag__='b', bold=1, fontName='Helvetica-Bold', fontSize=8.5, greek=0, italic=0, link=[], rise=0, text='Module', textColor=Color(0,0,0,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph	Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': '**Description**' 'frags': [ParaFrag(__tag__='b', bold=1, fontName='Helvetica-Bold', fontSize=8.5, greek=0, italic=0, link=[], rise=0, text='Description', textColor=Color(0,0,0,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph
Home Page	Displays the website and featured products.
Product Page	Shows available products and their details.
Search and Filter	Finds products by name, category, and price range.
Shopping Cart	Manages selected products and quantities.
Checkout	Collects customer and delivery information.
Payment	Provides Cash on Delivery and online payment options.
Email System	Sends order confirmation and status notifications.
Order Management	Tracks and updates order status.

3. Project Workflow

1. Customer visits the website
2. Views, searches, and filters products
3. Adds products to the shopping cart
4. Proceeds to checkout
5. Selects Cash on Delivery or Online Payment
6. Confirms the order
7. Receives order confirmation and status emails

4. Expected Outcome

The final application will allow customers to browse products, search and filter items, add products to their shopping cart, complete checkout, select a payment method, and receive email notifications about order confirmation and delivery status.

5. Conclusion

This E-Commerce Web Application will provide an easy and convenient online shopping experience. It will help customers purchase products online and track their orders.
